HIGH-PERFORMANCE SCRAPER FOR CONVEYOR BELTS

acman[®] / RD

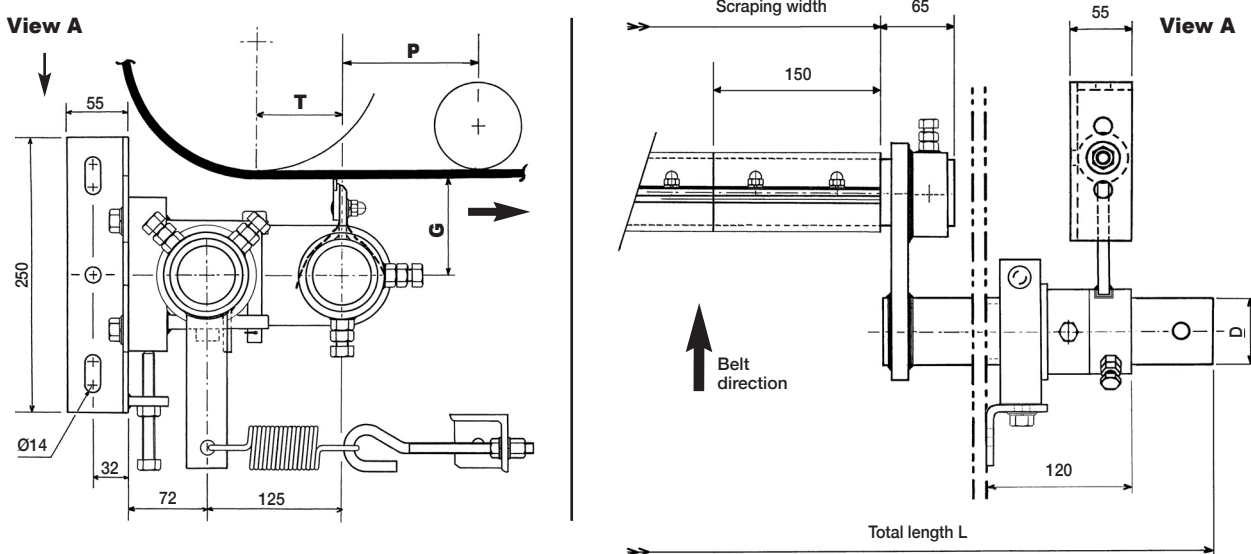

The **acman**[®] / RD was created to clean rubber and thermoplastic conveyor belts in waste sorting and recovery centres.

The two underlying scrapers in the range are always fitted with **BELLE BANNE RS 150** scraping blades made of high-quality tungsten carbide.

The **acman**[®] / RD scraper with one direction of travel is the most technical version; equipped with a spring pressure system and various adjustments, it can be fitted with an optional manual disengagement system that allows the scraper to be quickly taken out of service for its maintenance.

A pressure roller or equivalent adaptation is used to stabilise the belt for long-lasting efficiency.

The whole scraper is given a corrosion-prevention paint treatment and all fastenings are stainless.

STANDARD PRODUCTION RANGE

The mounting brackets can be installed towards the back.

REFERENCES	STOCK	BELT WIDTH	SCRAPING WIDTH	N° OF BLADES	TOTAL LENGTH L	D	G	WEIGHT
RD 1050 - RS	*	1000	1050	7	1650	48,6	80	28 kg

• Options :

- Scraping width < 1050 mm
- Stainless steel version

DESIGNATION

The full designation includes the type of scraper, the scraping width and the type of blade.

Exemple : **RD 1950 / R - RS**

SPARE PARTS

- Scraping blades : **RS 150 / BRD**
RSI 150 / BRD (Stainless)
 (Polysheet included)
